what is

HASIB OS

by : ameer majed

Hasib OS

Hasib OS is a Linux distribution based on Arch Linux, designed to deliver a lightweight and fast desktop experience .using the XFCE environment

The system focuses on simplicity, performance, and user control. It excludes artificial intelligence features and additional preinstalled utilities, offering a clean and minimal setup aimed at users who prefer to customize .their own workflow

Hasib OS is distributed as a Live ISO, featuring a graphical installer (not Calamares). It is optimized for older or lower-end hardware, providing quick startup and responsive performance compared to larger distributions such as .Ubuntu

KDE Connect is an open-source tool that lets your computer and smartphone communicate with each other — kind of like syncing them together.

:Here’s what it can do

Share files easily between your phone and PC (drag-and-drop or .right-click → send to phone)

Mirror notifications — get your phone’s notifications on your .desktop

Use your phone as a touchpad ⌨️ .or keyboard for your computer

Reply to SMS or messages directly .from your desktop

See your phone’s battery level on .your PC

Control media playback (music,video) from your phone.

Clipboard sync — copy text on one .device, paste it on the other

To install it in hasib os

sudo pacman - S kdeconnect

DE Plasma is a desktop environment — basically, the graphical user interface (GUI) that sits on top of your Linux system.

:Think of it like this

inux = the engine of a car (powerful, but command-line only)

DE Plasma = the dashboard, steering wheel, and seats — the part you actually see and interact with.

:Here's what makes KDE Plasma special

Modern design — clean, polished, and highly customizable (it can look like Windows, macOS, or something unique).

ghtweight and fast — despite all its animations and polish, it runs efficiently.

Feature-rich — comes with tools like Dolphin (file manager), Discover (app store), and Konsole (terminal).

Privacy-focused — no telemetry or ads, totally open-source.

Fully customizable — you can change everything: panels, themes, icons, widgets, window behavior, etc.

Integrates with KDE Connect — syncs perfectly with your Android phone.

's developed by the KDE Community, one of the biggest and oldest open-source groups in the Linux world.

To install it use these codes

1 sudo pacman -Syu

2 sudo pacman -S plasma

sudo pacman -S sddm

sudo systemctl enable sddm
